- 2015 **Council of State and Territorial Epidemiologists - Webinar** US CSTE
I delivered a webinar to over 300 state and territorial epidemiologists with the following goal, participants will be able to: 1. Demonstrate how an integrative surveillance system can be used to improve situational awareness and early detection; 2. Assess the performance of various data sources, e.g. primary health care providers, laboratory data, emergency department chief complaints, and Google Flu Trends, for surveillance; and 3. Evaluate the utility of primary health care providers and emergency department chief complaints for predicting influenza-associated hospitalizations in at risk populations.
- 2015 **Chikungunya Surveillance in Puerto Rico** US CDC
In response to the recent chikungunya outbreak in Puerto Rico, we are collaborating with the CDC to select clinics for enhanced chikungunya surveillance. The system design algorithms we developed for influenza have been adapted to interrogate data from Dengue virus, whose dynamics are highly correlated with chikungunya in countries where both viruses are endemic.
- 2015 **Chikungunya Risk Mapping in Texas** Texas Department of State Health Services
In response to recent, large chikungunya outbreaks in the Caribbean, we are collaborating with the Texas Department of State Health Services to improve surveillance for the virus in mosquitoes and humans.
- 2013–15 **Right Sizing Influenza Virologic Surveillance Project** Association of Public Health Labs & US CDC
This work is an extension of the previous "right-size" project with APHL and CDC. Here, we will develop an enhanced suite of sample size calculators to guide state-level laboratory influenza testing by addressing biases within the current influenza surveillance system, anti-viral resistance, and vaccine strain selection. The project has three specific objectives: (1) detection of rare/novel influenza strains including confirmation of the Influenza Virologic Surveillance Right Size Roadmap thresholds, (2) improve surveillance for vaccine virus selection, (3) enhance monitoring for antiviral resistance.
- 2012–13 **Influenza Surveillance Right Size Sample Size Calculators** Association of Public Health Labs & US CDC
This project had three objectives: (1) to evaluate the representativeness of CDC influenza laboratory surveillance data, (2) to develop a statistical tool to guide state-level laboratory sampling strategies, and (3) to develop recommendations for modifying the national laboratory-based influenza surveillance system to improve the power and representativeness of lab surveillance data. The calculators are web-based and currently hosted on the APHL [website](#).

- 2012–13 **Augmentation and Use of BioSense 2.0 in Texas** Texas Department of State Health Services
This project had three objectives: (1) to assess the performance of current BioSense 2.0 for early detection of infectious disease outbreaks and surveillance of epidemic transmission, morbidity and mortality throughout the state, (2) to develop criteria for targeting additional hospitals for inclusion in BioSense 2.0 to improve surveillance in at risk populations, and (3) to develop strategic guidelines for augmentation of BioSense 2.0.
- 2011–13 **The Texas Pandemic Flu Toolkit** Texas Department of State Health Services
The Texas Pandemic Flu Toolkit is a collection of tools developed by the Meyers Research Group at the University of Texas at Austin for the Texas Department of State Health services. These tools include: an antiviral distribution optimizer, a vaccine allocation optimizer, a pandemic influenza simulator, a pandemic influenza exercise tool, and a ventilator stockpiler. The tools are available at the [Texas Pandemic Flu Toolkit Website](#).
